Test Results Overview

1. ***Test 1: User Registration***
   Result: Pass
   Issues Encountered: No issues encountered.

2. ***Test 2: User Login***
   Result: Pass
   Issues Encountered: No issues encountered.

3. ***Test 4: View & Filter Facilities***
   Result: Pass
   Issues Encountered: No issues encountered.

4. ***Test 6: Make a Reservation***
   Result: Pass
   Issues Encountered: No issues encountered.

Test Result Analysis

Test 1: User Registration

- *The user registration functionality was successfully validated. New users were able to create accounts using valid credentials, and the system correctly assigned roles based on institutional information. All user data was accurately stored in the PostgreSQL database. The system behaved consistently across multiple test attempts, and no discrepancies or errors were observed.*

Test 2: User Login

- *The login process operated as expected in all test scenarios. Users were authenticated successfully with valid credentials and redirected to the main dashboard without any delay or system error. Invalid login attempts were correctly rejected. The system demonstrated stable and reliable behavior throughout testing, with no issues encountered.*

Test 4: View Facility List & Filter Facilities

- *The system correctly displayed the list of available facilities upon accessing the filter facilities page. Filtering functionality worked accurately based on selected criteria such as facility type and additional attributes. The results returned by the system matched the expected dataset in all cases. The feature performed consistently and no functional or performance issues were detected.*

Test 6: Make a Reservation

- *The reservation feature was tested successfully under different scenarios. Users were able to create reservations for available facilities, and all reservation data was correctly stored in the database. The system effectively prevented duplicate or conflicting reservations for the same time slot. All expected constraints were enforced properly, and no errors or inconsistencies were observed.*

Logs and Outputs

Other Logs and Outputs are uploaded to UI_Test_Result.
